## Misspellings can help you out

2/8/2008

It happens to all of us. We mistype something. Or maybe we misspell a word.

Typos and misspellings can be a source of embarrassment. They make us look bad. Fortunately, software like Microsoft Word checks for errors.

When you post something online, though, things are different. The tools we use don't generally check for misspellings and typos.

Many eBay sellers aren't careful. You can use this to your advantage. When you're looking for something, check for misspelled items. Other buyers may not find them. That means you might be able to get a real deal.

TypoBuddy will help you check eBay for misspelled listings. You can also check Craigslist, if you like. Just enter the correctly spelled search term. TypoBuddy checks for common misspellings!
